# Distributed Online Judge: Introduction

<https://github.com/IU-MAP/project-distributed-online-judge>

---

**Sphere online judge**

---

# Motivation

Online judging is a resource-intensive process

Many solutions, large datasets, intense CPU usage, etc

Powerful servers needed

Expensive

... and error-prone

---

---

# Motivation

Solution: follow Lichess approach

Volunteer-based distributed computing

Effective

Cheap

---

---

# Technical Stack

## Frontend:

ReactJS, HTML, CSS, Material UI

## Backend:

NodeJS, MongoDB

## Test & doc:

Jest, Swagger, JSdoc

---

---

# Project Organization

---

# Git Flow

---

# Rules

## Branches:

Create a separate branch for each feature/issue

Branch name syntax:

*<Fix | Feat | Doc | Test>: <server | client> - <description>*

## Commits:

Descriptive please!

---

---

---

# Scrum

## Scrub Board:

Implemented in GitHub project

## Backlog Items:

GitHub issues.
